ECONOMY

The Economy of the Roleplay is Points, and special Resources. Points are the catch all for all materials mines, and money spent to create buildings and units.

All points must be moved to production (at least the same system) and stored. Excess floating points at the end of the turn will be lost.

ACTION ECONOMY

Turns are ~6 months and Actions are ~a month in game time.

You can task any unit to do 6 actions a turn; this simulates them doing things for the 6 months. Some actions require multiple months to multiple turns to complete.

SHIPS AND COMBAT

Component slots Weapon (W) Utility (U) Defense (D), FTL (F) the ship class supplies the component currency. Components cost this currency to equip.

For an example. A class 5 ship has 4W. That would mean a Class 5 ship can have 1 Large 1 Small weapon, or 2 Medium weapons, or 1 Medium 2 small weapons, or 4 small weapons.

Ship Class						
Class	Components	Health	Cargo (points)	Tech Tier	Base Build time	Base cost
1	3U, 1 D, 1 F	10	100	1	2 Actions	150
2	1 W, 2 U, 2 D, 1 F	40	150	1	1 Turn	300
3	2 W, 3 U, 3 D, 1 F	80	200	1	1 Turn	450
4	3 W, 4 U, 4 D, 1 F	160	300	2	2 Turn	600
5	4 W, 5 U, 5 D, 1 F	320	400	2	2 Turn	750
6	5 W, 6 U, 6 D, 1 F	640	500	2	3 Turn	900
7	6 W, 7 U, 7 D, 1 F	1200	600	3	4 Turn	1050
8	7 W, 8 U, 8 D, 1 F	2500	800	3	5 Turn	1200
9	8 W, 9 U, 9 D, 1 F	5100	1000	3	6 Turn	1350
10	10 W, 10 U, 10 D, 1 F	10200	1200	4	7 Turn	1500

Weapon slots					
Class	W cost	Base attack power	Point adjustment	Build time Adjustment	Tier
Cargo	1	0 (Cargo: +100×Tier)	+(10×Tier)	--	1
Small	1	20×Tier	+(10×Tier)	--	1
Medium	2	60×Tier	+(30×Tier)	--	1
Large	3	240×Tier	+(90×Tier)	--	2
Extra Large	5	1200×Tier	+(180×Tier)	--	2
Super Weapon	10	28800	+1440	3	4

Defense slots					
name	D cost	Base defense power	Point adjustment	Build time Adjustment	Tier
Evasive Thrusters	1	$50 \times \text{Tier}$	$+(2 \times \text{Tier})$	--	1
Armor	1	$50 \times \text{Tier}^2$	$+(10 \times \text{Tier})$	--	1
Shield	2	$150 \times \text{Tier}^2$	$+(20 \times \text{Tier})$	--	2
Displacement Shield	5	$400 \times \text{Tier}^2$	$+(300 \times \text{Tier})$	--	3
Reality Wrap Shield	8	30400	$+\text{Base cost} \times 4$	3	4

Utility slots			
name	U cost	Effect	Point adjustment
Cargo	1	0 (Cargo: $+100 \times \text{Tier}$)	$+(10 \times \text{Tier})$
Science Center	2	Let's a non-class 1 ship act as a class 1. In FTL lane creation and Surveying	+300
Salvage	3	Extract points from destroyed fleets. (40% lost)	+300
FTL Stealth	2+tier	Only one per ship. Reduces FTL Detection by Tier	$+(100 \times \text{Tier})$
Stealth	1+tier	Only one per ship. Def power: (undetected) $+60 \times \text{Tier}^2$	$+(50 \times \text{Tier})$
Anti-Stealth	2+tier	Only one per ship. Detects stealth equal to tier (coin flip if equal, auto detects if weaker)	$+(100 \times \text{Tier})$
Targeting computer	3+tier	Only one per ship. $+300 \times \text{Tier}^2$ Attack power (weapons required)	$+(100 \times \text{Tier}^2)$
Jammer	4+tier	Only one per ship. $+300 \times \text{Tier}^2$ Defense power	$+(200 \times \text{Tier})$
FTL Detection	2+tier	Detect Unknown FTL movements around you.	$+\text{Base cost} \times \text{Tier}$
Repair teams	2+tier	Only one per ship. $\times 3 + \text{tier}$ Health	$+\text{Base cost} \times \text{Tier}$

Building Ships

In order to build ships, you must have a shipyard available. A Shipyard can queue up as many ships equal to its tier number at a time. However, only up to its tier number. A shipyard 2 for example can queue 1 Tier 2 ship or 2 tier 1 ships. Building ships above the tier a shipyard can support inflicts a 4 turn per tier penalty.

Combat

Before entering combat, each player must log their fleet's combat ratios.

These values determine how your fleet's combat effectiveness shifts as the fleets take damage.

Step 1 Establish Baseline Ratios

Record your fleet's total **Health**, **Attack Power**, and **Defense Power**.

Then calculate:

- **Health-to-Attack Ratio:**
 $\text{Health} \div \text{Attack Power}$
- **Health-to-Defense Ratio:**
 $\text{Health} \div \text{Defense Power}$

These ratios reflect how efficiently your fleet converts durability into firepower and resilience.

Step 2 Monitoring Combat Losses

As your fleet sustains damage, recalculate its remaining **effective power** using the recorded ratios.

Example Combat Log

Fleet Integrity Report:

Health: 5,000

Attack Power: 14,000

Defense Power: 12,000

Initial Ratios

$H/A = 5,000 / 14,000 = 0.357$

$H/D = 5,000 / 12,000 = 0.416$

After combat round

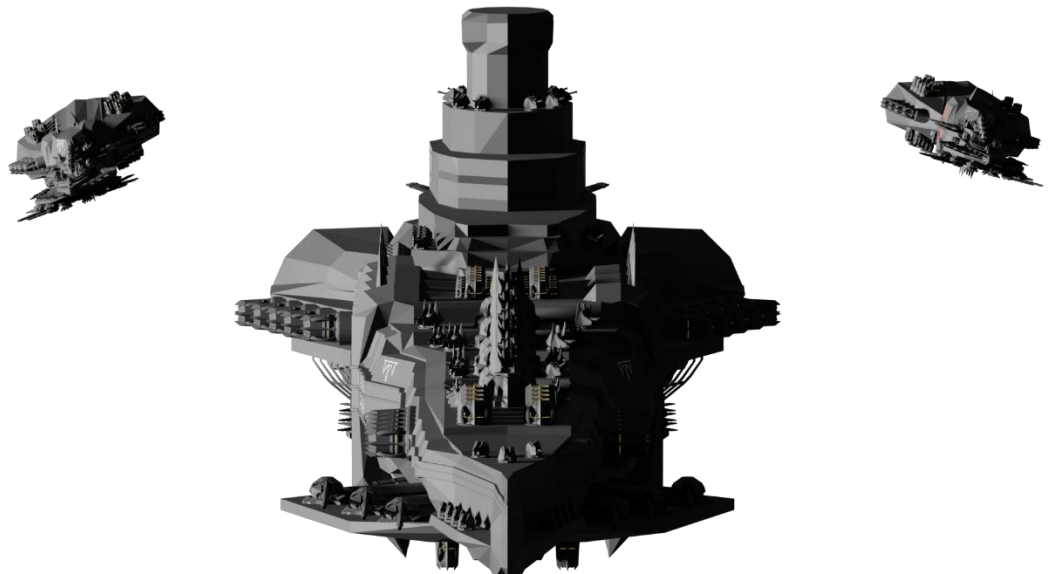

Damage Sustained: 2,700

Remaining Health: 2,300

Updated Combat Output

$\text{Attack Power} \approx 2,300 / 0.357 = 6,442$

$\text{Defense Power} \approx 2,300 / 0.416 = 5,528$

Combat: Bonuses	
Atk-Def power Difference	Bonus (+/-)
0-1k	0

0-2	0%
3-4	5%
5-6	10%
7-8	15%
9-10	20%
11-13	40%
14-15	60%
16-17	80%

Fleet Combat Overview

Attacker: The commander initiating an attack action.

Defender: The commander whose fleet is being targeted by that attack.

Each fleet's Health, Attack Power, and Defense Power represent the combined strength of all ships within it.

Engaging the Enemy

When initiating an attack, compare the Attacker's Attack Power against the Defender's Defense Power and refer to the Combat Bonuses Table.

- If your Attack Power exceeds the opponent's Defense Power, you gain a positive modifier to your attack roll.
- If your Attack Power is lower, you suffer a penalty instead.

Example:

- Attacker: 8,500 ATK
- Defender: 6,000 DEF
→ Difference: +2,500 → Roll 1d20 + 2

If reversed (6,000 ATK vs. 8,500 DEF):

→ Difference: -2,500 → Roll 1d20 - 2

Combat Flow

Combat proceeds through alternate activations, with fleets taking turns to act.

1. Attacker declares target and rolls the D20 with their modifier.
2. Defender records the result.
3. The roll result is then cross-referenced on the Dealing Damage Table.

Calculating Damage

The damage result from the Dealing Damage Table determines the percentage of the attacker's total Attack Power that successfully damages the defender's Fleet Health.

However, if the **Defender's roll is higher** than the Attacker's:

- **No damage** is dealt to the Defender's fleet.
- The Defender gains **advantage** on their **next attack roll** (roll 2d20 and take the higher result).

This represents a tactical counterstrike

Planetary Siege Operations

Once a **fleet battle** has been won, the victorious commander may initiate a **planetary siege**.

A siege uses your fleet's **current Health, Attack Power**, and **Defense Power** to assault a planetary stronghold, whether it's an **Outpost, Town, City**, or **Mega City**.

Each planetary tier possesses its own **Siege Attack** and **Siege Defense** values.

To capture the world, your fleet must overcome these defenses through sustained orbital bombardment.

When the defenders are defeated, the planet becomes **unowned**, allowing you to **claim it under your control**.

Time in Combat

While in combat, **each Attack/Defense exchange** represents **one action**, equivalent to **one month of in-world time**.

A single **Turn** consists of up to **six Attack/Defense Actions** — representing half a year of strategic operations, troop movements, and fleet maneuvers.

Other Combat Actions

Commanders may choose from several tactical maneuvers during combat. Each carries its own risks and benefits.

Retreat

A strategic withdrawal from the system.

- **Restriction:** You **cannot retreat** while your **FTL Drive** is still on cooldown.
- **If retreating during a Defense Phase:**
The enemy gains **+4 to their next Attack Phase** as you attempt to disengage.
Your fleet **leaves the system**, and **combat ends**.
- **If retreating during an Attack Phase:**
The **Defender automatically wins** the exchange.
Your fleet **leaves the system**, and **combat ends**.

Concentrate Fire

Sacrifice defense for overwhelming firepower in your current **Attack Phase**.

- Gain **+50% Attack Power** for the **current Attack Phase**.
- Enemies gain **+5 to their next Attack Phase** as a result of your exposed formations.

Concentrate Defense

Divert power from your weapons to reinforce shields and formation integrity.

- Apply **-5 to your Attack Phase** this turn.
- Gain **+50% Defense Power** for your **upcoming Defense Phase**.

Commanders

Commanders are elite officers who graduate from the Fleet Academy as one of three specializations: **Attacker**, **Defender**, or **Balanced**.

They provide significant power bonuses to their fleets based on their specialization and level.

Commander: Creation

level	Required Settlement	Required Planet Output	Commander Attribute rolls	Attacker (d4) (attack power)	Defender (d4) (defense power)	Balanced (d4) (atk/def power)
1	Outpost	50-250	1	100-400	100-400	50-200
2	Outpost	300-500	1	500-800	500-800	250-400
3	Town	550-750	2	900-1200	900-1200	450-600
4	Town	800-1000	2	1300-1600	1300-1600	650-800
5	City	1050-1250	3	1700-2000	1700-2000	850-1000
6	City	1300-1500	3	2100-2400	2100-2400	1050-1200
7	Mega City	1550-1800	4	2500-2800	2500-2800	1250-1400
8	Mega City	1850-2000	4	2900-3200	2900-3200	1450-1600

Commander Power Bonus

- **Attackers** grant an **Attack Power** increase.
- **Defenders** grant a **Defense Power** increase.
- **Balanced** commanders provide smaller bonuses to both, focusing on adaptability.

For **Attackers** and **Defenders**, the power bonus increases in **increments of 400 per Commander Level**.

To determine the exact bonus within that range, **roll 1d4** to set their position in the bracket.

Example:

You gain a **Level 5 Attacker Commander** and roll a **4** on a d4.

This means the commander provides an **Attack Power bonus of 2,000** to their fleet.

Note: These bonuses only apply if the Commander is assigned to a **fleet equipped with weapons** (for Attackers) or **defensive systems** (for Defenders).

Commander Attributes

Each Commander also possesses unique **Attributes** that define their leadership style and tactical advantages.

Refer to the **Commander Attribute Table** and roll a number of times equal to the Commander's **Level** to determine their traits.

Commander: Attribute			
D12	Name	Effect	Rerolling
1	Engineer	Out of combat: Rebuild time reduced by ½ (Min 1 turn)	No effect reroll attribute
2	Cautious	Reroll an Anti-stealth coin flip.	Gain another anti stealth reroll
3	Trickster	Retreating during a defense phase lets you roll to defend against attacker.	No effect reroll attribute
4	Unyielding	+1 to attack rolls reroll attribute if nervous was rolled first	Another +1 to attack rolls
5	Void Hunter	2x attack power vs hostile creatures	No effect reroll attribute
6	Reckless	Concentrate fire is 3x attack power. But your enemy gets +10 to their attack phase. If fleet health is 50% or lower at end of combat flip a coin on Heads commander has died	No effect reroll attribute
7	Nervous	-1 to attack rolls reroll attribute if unyielding was rolled first	No effect reroll attribute
8	Lethargic	+1 turns when moving on unexplored lanes.	Another +1 turn
9	Material Liberator	Can collect up to 10% of floating points from wreckage after a battle without salvage crew utility.	Up to another 10%
10	Hardiness	+1000 health to each ship in fleet.	+1000 more Health
11	Annihilator	When only dealing with Orbital Cannons Deal 2x attack power on them.	No effect reroll attribute
12	Reinforcer	+500 Defense to each ship in fleet.	+500 more Defense

Special Actions

Commander: Special actions Eco	
level	Activations/Number of actions
1	1
2	1
3	1
4	2
5	2
6	2
7	3
8	3

Commanders possess access to **Special Actions** unique to their **type**, **Attacker**, **Defender**, or **Balanced**.

These powerful maneuvers reflect their tactical expertise and can decisively shift the flow of battle.

Action Proficiency

A Commander's **proficiency** with Special Actions, including how many they **know** and how many they can **activate per combat**, is determined by their **Level**.

Refer to the **Commander Action Chart** (see chart to the left) for exact values.

Once a Commander has used all of their available **activations** for a combat encounter, they can no longer use any Special Actions until the next battle.

Rolling for Actions

When determining which Special Actions a Commander knows, **roll the number of times indicated** by the chart rerolling any duplicates.

Some Special Actions are designated as "Once per Battle" abilities, meaning they can only be activated a single time per combat regardless of remaining activations.

Commander: Special actions- Attacker		
	Name	Effect
1	Suppressive Fire	Enemy commander cannot use abilities in their next defense phase.
2	Flanking Maneuver	Force enemy fleet to re-roll their defense roll this phase
3	Overwhelming Barrage	Roll two separate attack rolls this attack phase but apply a -5 penalty to both rolls.
4	Decapitation Strike	Once per battle, declare before rolling. If your attack succeeds, triple the damage dealt. If it fails, you suffer -5 to all rolls until the end of the next round.

Commander: Special actions- Defender		
	Name	Effect
1	Intercept Strike	Reduce the Enemies roll 1 step.
2	Fog of War	Enemy rolls at disadvantage for one attack phase.
3	Hold the Line	If you take no damage this round, gain advantage on your next roll.
4	Adaptive Shields	Once per battle, cancel all damage from a single attack roll.

Commander: Special actions- Balance		
	Name	Effect
1	Feint Attack	Declare an attack but deal no damage; instead force the defender to suffer disadvantage on their next roll defense roll.
2	Momentum Shift	Swap the attacker/defender rolls for the next action. Cannot use with abilities that force a penalty.
3	Risky Gambit	Roll a D20. On 11+, double your damage this turn; on 10 or less, deal no damage at all.
4	Crossfire Trap	If you win a defense roll, immediately deal 25% of your attack power back as damage.

Commander Assignment & Survival

When assigned to a fleet, a **Commander** will always be stationed aboard the **largest class vessel** within that formation typically serving as the flagship or command ship. If the fleet is **completely destroyed**, the Commander is considered **killed in action (KIA)**. However, if **even a single ship** survives the engagement, it is assumed the Commander also **survived**, having escaped aboard the remaining vessel.

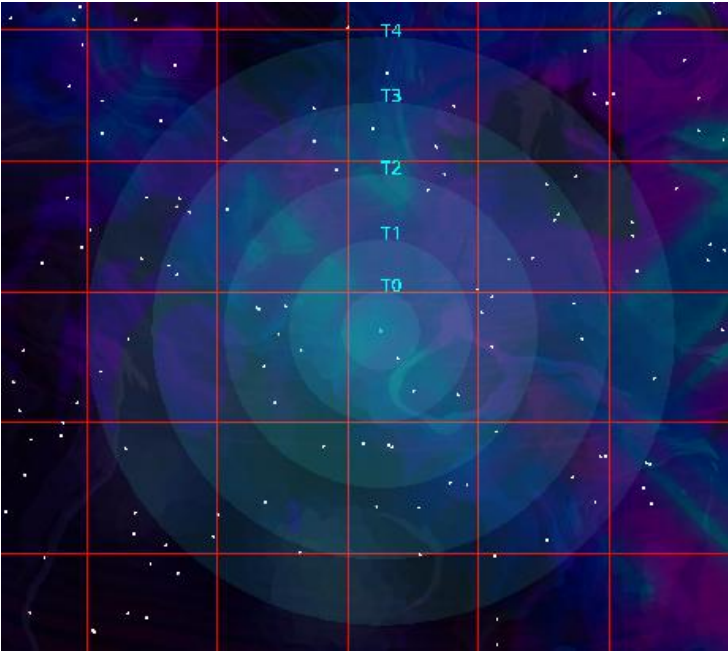

Exception Reckless:

Commanders with the **Reckless** attribute are far more likely to die in battle.

If their fleet is reduced to 50% health at the end of combat flip a coin, on tails the commander has died.

FTL TRAVEL

FTL slot				
Name	F cost	Range		Point adjustment
FTL	1	New	T0+tier	+100×Tier
		Established	Tier (min 1)	

FTL Travel & Lane Creation

By default, all ships are equipped with **Tier 0 (T0) FTL Drives**, allowing them to create **FTL lanes** within **Free Zones** without penalty.

A ship can only **create one new FTL lane per turn**. If a ship moves along established lanes during that turn, it must **wait until the next turn** before attempting to form a new one.

Class 1 Vessels & FTL Creation

To create a new **FTL Lane**, a ship must move directly from one system to another **without an existing lane**.

Class 1 ships (or any ship equipped with a **Science Center**) can create FTL lanes **automatically** if traveling at reduced speed. This process requires additional **turns** based on the FTL Tier:

FTL Tier	Extra Turns Required
T0	+4 turns
T1	+3 turns
T2	+2 turns
T3	+1 turn
T4	+0 turns

Moving Outside Tier Range or Expediting

When a ship travels **outside its FTL tier range**, **expedites** travel, or **lacks a Science Center** (Class 2+ ships), it must roll to determine success.

- **Roll 1d20.**
- Apply a **-5 penalty** for each zone beyond your FTL tier range.

Results:

- **10 or higher:** Successfully reaches the target system. The new FTL lane becomes **stable** and usable **at the start of your next turn**.
- **Below 10:** The ship is **lost in FTL** (it may reappear later).

Using Established FTL Lanes

Once a lane is established:

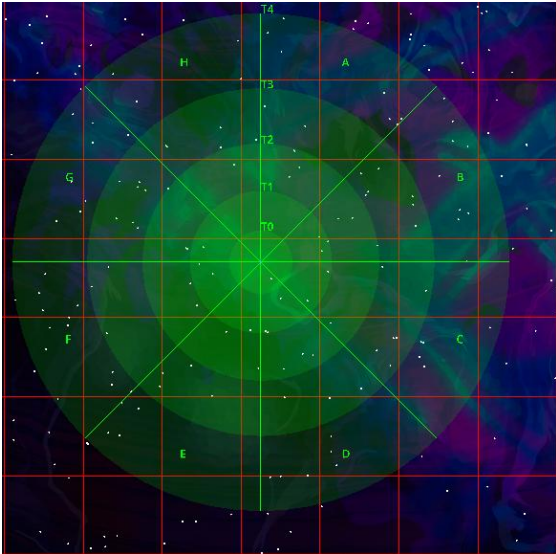

- **Any ship** can travel through it at the cost of **1 activation**.
- Ships with higher-tier FTL drives can travel through a number of **established lanes per turn equal to their tier**.
(Example: A T3 ship can move through 3 established lanes per turn.)

FTL System Cooldown

After a ship completes either:

- Creating a new FTL lane, **or**
- Traveling its **maximum number of established lanes**,

Its **FTL system becomes drained** and must **cool down** for **1 full turn** before it can be used again.

FTL Detection

Building a Deep Space FTL detector will show you roughly where movements around you are. Zones around the point of origin are set between A-H with Range 'free' being 1 and range 'T4' being 5. You need the tier equal to the zone to detect anything out that far.

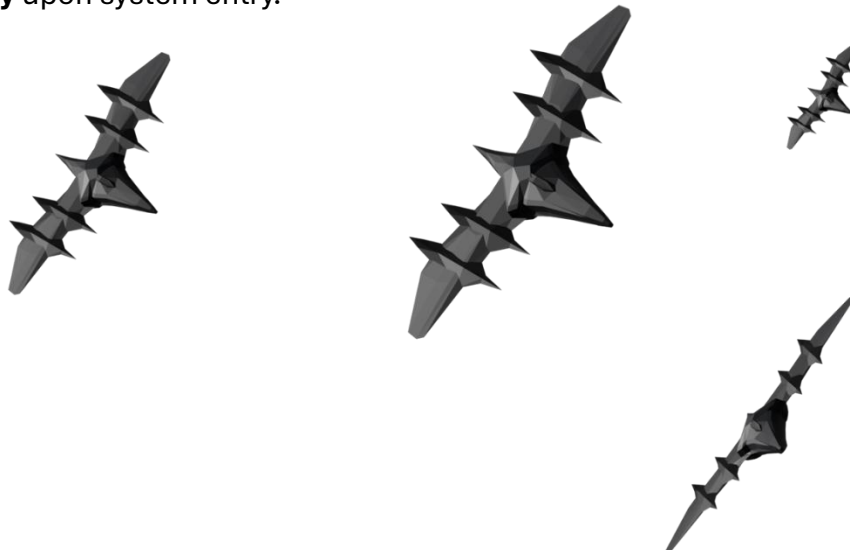

SYSTEM EXPLORATION

Surveying

Class 1 Ships are equipped with advanced sensors and exploration equipment, allowing them to **begin surveying a system immediately upon arrival**, even on the same turn they moved there.

All **other ship classes** must **wait until the start of their next turn** to begin surveying **unless** they are equipped with a **Science Center Utility**.

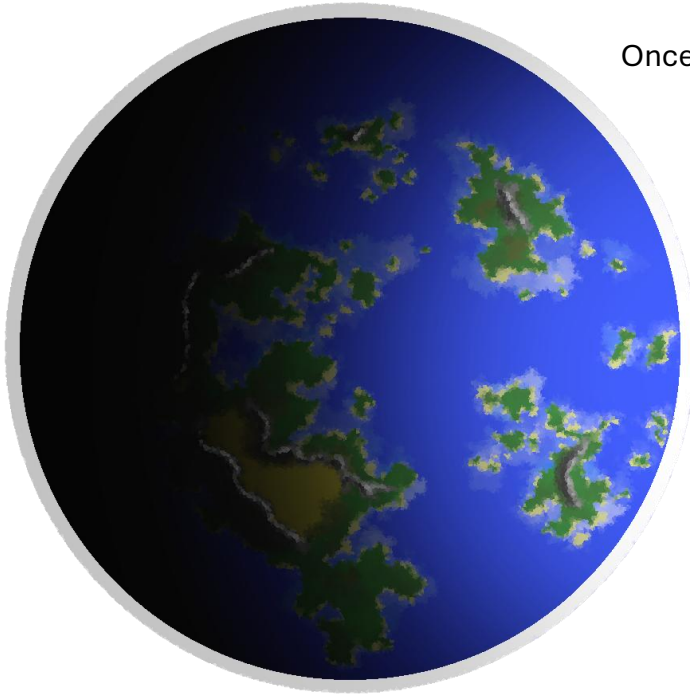

The **Science Center** grants the necessary scanning and data-processing capability for higher-class ships to **survey immediately** upon system entry.

System generation

System Age	
	Effect
1	2 non-planetaries
2	4 non-planetaries
3	6 non-planetaries
4	8 non-planetaries

Non-Planetary		
	Type	Effect
1	Asteroid belt	Roll d6 Planet class (a-f): build a mine to extract that many points.
2	Asteroid belt	Roll d6 Planet class (a-f): build a mine to extract that many points.
3	Ancient Debris	Reclaim: 1-20k points
4	Hostile Creature	Atk: 1-10k Def: 1-10k HP: 1-10k reclaim: 1-10k points
5	Unique Resource	An Asteroid belt with the players unique resource deposit. Normal Asteroid belt for NPC
6	None	Nothing

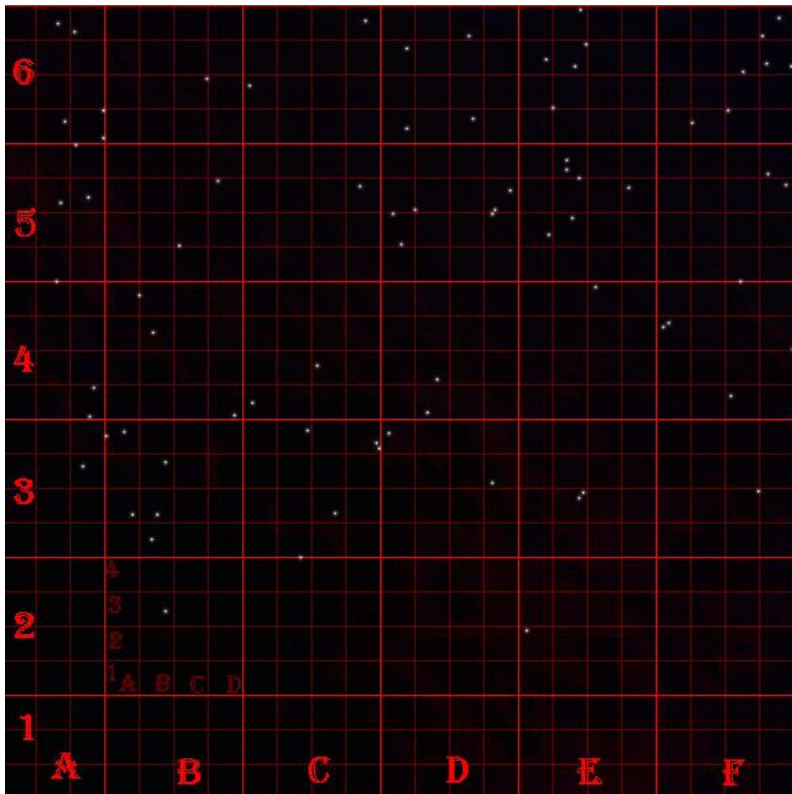

Once the number of planets is discovered roll for each to gain their worth.

Naming a system

Naming a system will use the Grid map of galaxy in question. Inside the grids multiple stars will be numbered from left to right, top to bottom.

Systems on borders will always be considered to be down one or left one.

Example. B2 It has one star, located at the B3 Sub-grid. So, its name will be B2-B3-1.

D5-D3 has 2 stars, with the names going left right, top bottom are D5-D3-1, D5-D3-2.

BUILDINGS

Planetary Construction

Each **building type** provides unique benefits depending on its function, such as resource production, defense, research, or logistics.

The **number of buildings** that can be constructed on a planet is determined by its **Planet Size**.

Establishing a Colony

Before you can begin development on a new planet, you must first construct an **Outpost**.

This serves as the foundation for further expansion and enables planetary management and logistics.

Upgrading Buildings

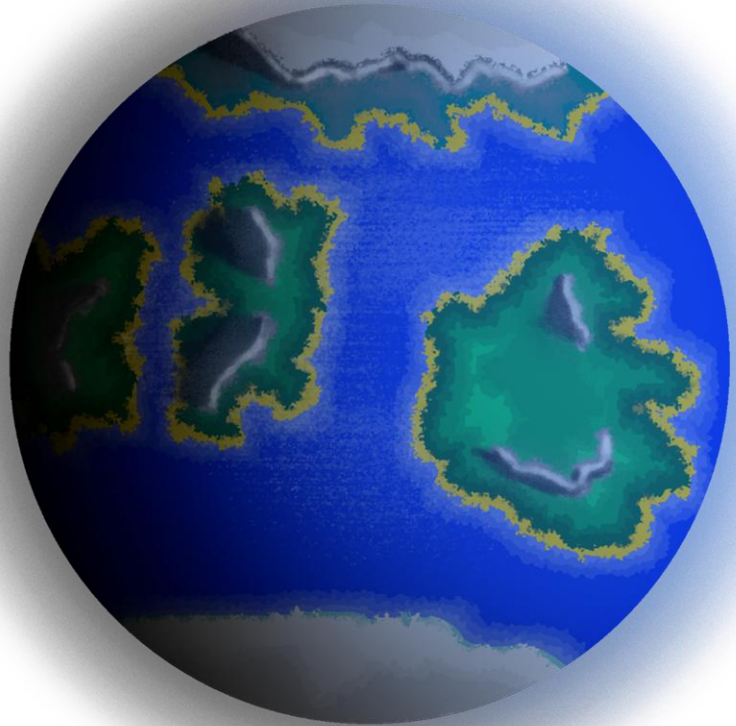

When **upgrading** an existing building to a higher tier:

Take the **difference** between the **Cost** and **Build Time** of the new tier and your **current tier**. That difference becomes the **upgrade cost and time**.

If you construct a **higher tier building from scratch**, you must pay the **full listed cost and build time**.

Building in a New System

You may begin planetary construction in a newly surveyed system **at the start of the next turn** following a successful survey.

Planet				
tier 1				
building	description	cost	Build Limit	Build time
Outpost t1	Establishes control of a planet. Can creates commanders capped at level 2 every 6 turns Siege Attack: 90 Siege Defense: 100 Health: 200	200	1	2A
Mine	Extracts points from planets/asteroids per turn. Output×Tier Points/turn	300×Tier	1	2A×Tier
Research Center	Research T1 tech. (upgrading to T2, 3 or 4 unlocks researching that tech)	500×Tier	1	2×Tier
Anti orbital cannon	Def Power: 800×Tier Attack Power: 1200×Tier Health: 1000×Tier	1000×Tier		1×Tier^2
Cargo	2000×Tier^2	500×Tier		1×tier
Fleet Academy	Produces a Commander every 4 turns. When a commander graduates its level is dependent on settlement and planet output. You commission them to the fleet for 400×Level points.	1000	1	4
tier 2				
Town t2	upgrade of outpost create commanders capped at level 4 every 6 turns Siege Attack: 900 Siege Defense: 1000 Health: 2000	5000	1	4
tier 3				
City t3	upgrade of town Creates commanders capped at level 6 every 6 turns Siege Attack: 9000 Siege Defense: 10000 Health: 20000	10000	1	6
tier 4				
Mega City T4	upgrade of City can create commanders capped at level 8 every 6 turns Siege Attack: 90000 Siege Defense: 100000 Health: 200000	20000	1	8

Space				
tier 1				
building	description	cost	Build Limit	Build time
Shipyards t1	Produce T1 ships, +4 turns per tier above one this shipyard attempt to produce.	800	1	2
trade post t1	Able to move points automatically from the system it is built in jump points (tier) FTL lanes over at 20% tax	600×Tier	1	3×Tier
Defense station	Def Power: 400×Tier Attack Power: 800×Tier	850×Tier		1×Tier
FTL Detector	Detects FTL movements following the range finder equaling tier	900×Tier	1	2×Tier

Cargo	10000×Tier^2	2000×Tier		3×Tier
tier 2				
Shipyards t2	Produce T2 ships, +4 turns per tier above one this shipyard attempt to produce	1600	1	4
tier 3				
Shipyards t3	Produce T3 ships, +4 turns per tier above one this shipyard attempt to produce	3200	1	6
tier 4				
Shipyards t4	Produce T4 ships	4000	1	8

TECH PROGRESSION

Researching requires a Research Center to be built on a planet. You can have as many researches going as you have centers for. Research takes $1 + \text{tier}$ turns to complete and costs $200 \times \text{Tier}$ points to research.

On the Tech Tree Below The first section is Researches already unlocked at the start of the game.

FACTIONS

Player Factions start with 1 Unique resource. These resource is made with the GM; your Starting world generates 1 unit per turn. Surveying new systems may prove to finding more generations of your Unique resource.

Each Player is recommended to have the following Template laid out for their faction.

Faction Info:

Name:

Motives:

Founders:

Leaders:

Military Leaders:

Political Leaders:

Colors: the color that will appear on the map.

Allies: List Allies found in the game

Opponents: List opponents found in the game

Battles: can be used to keep track of battles.

Unique Resources: keep track of the rules you and gm came up with for your resource

Politics:

Policies:

Battle Doctrine:

STARTING

When you have a faction, you will pick a starting condition.

	Condition 1	Condition 2	Condition 3	Condition 4
Starting points	3000 pts	2700 pts	2400 pts	2100 pts
Capital planet	Size:10 Class: j	Size:8 Class: i	Size:6 Class: h	Size:4 Class: g
Planet number	1	5	9	13
System age	4	3	2	1
Starting Commander	Lvl 8	Lvl 7	Lvl 6	Lvl 5

Starting System Setup

Your starting system represents the heart of your empire, the foundation from which you will expand across the stars.

Planet Count

Your Planet Number determines how many additional planets (beyond your Capital Planet) exist in your starting system.

Capital Planet

Choose your Capital Planet Type from the following options:

- Terran (Default), Gas, Barren, Liquid

Starting Infrastructure

Your Capital Planet begins with:

- A City
- A Mine
- A Tier 1 Research Center

Your Starting system begins with

- A Shipyard

System Traits

- Your starting system cannot contain hostile creatures. Rolled from non-planetaries, If the system's age roll would generate one, reroll the result.
- One of your non-planetary bodies (such as an asteroid belt or moon) will contain a Unique Resource specific to your faction.

Starting late

- Entering the game later grants you, your Capital planets income each round after the game started till you join. On top of your starting money.
 - If you join during turn 10 and are condition 4 you would have a starting point of $2100+350(9)$ or 5,250 points.

UNIQUE RESOURCES

Unique Resources are rare, faction-specific materials found only within your empire. Each faction's Unique Resource is distinct in nature, often reflecting their culture, biology, or technological focus.

Usage:

Only your faction initially knows how to process, refine, or weaponize its Unique Resource. These resources can be used in advanced technologies, unique ship modules, or special structures that rely on their properties.

Discovery by Others:

If another faction discovers or acquires your Unique Resource through trade, exploration, or conquest, they **cannot use it immediately**. To unlock its potential, they must **research its properties**, either through a dedicated project or reverse-engineering captured materials.

Researching Foreign Resources:

- Requires a **Research Center** (Tier 2 or higher).
- The process takes **4** turns to complete.
 - Knowledge how to use a resource can be given reducing the Turns by $\frac{1}{2}$ required to discover.
- Success allows the faction to add that resource type to their usable materials list.
